Impregnated solid wood

We use impregnated pine wood for our playground equipment, most of which comes from native forests in south-eastern Germany. Our wood is pressure-impregnated in accordance with Use Class 3 and in some cases Use Class 4 (in accordance with EN 335). Wickey PRO wood thus offers exceptional durability outdoors.

HDPE elements

Our coloured HDPE elements are made from 19 mm thick sheets that consist of 80% recycled material.

Selection of slides

A large selection of colours and three different material variants are available for the slides.

- HDPE 6 mm Rotomould
- HDPE 19 mm sheets
- Stainless steel (SS304)

Metal elements

All metal parts are made of high-quality stainless steel. We also offer a coloured, powder-coated metal variant for some components.

Net material

The net material consists of particularly robust, reinforced 16 mm ropes with an internal steel wire core that ensures maximum stability. The hard-wearing polypropylene sheathing ensures a long service life and reliable protection against the weather.

Anchorage

For anchorage, we use angle irons made of 5 mm thick, hot-dip galvanised steel. These ensure particularly stable and durable attachment in the ground. The anchors are specially designed for setting in concrete and are characterised by high weather resistance.
